TRAILER SEAL PROTOCOL AND SAFETY MEASURES

Only authorized personnel can remove the seal(s) upon arrival to the destination site unless required by in-transit inspections (DOT or other regulatory agencies, including but not limited to law enforcement) or special requirements known to ROAR Logistics.

The use of key or combination locks in lieu of seals for transported materials does *not* constitute a sealed load. All loads must have a seal(s) securing the vehicle during transport.

If the seal is broken in the event of an in-transit regulatory inspection (DOT, Ag Dept., law enforcement, etc.) or the driver believes the load has shifted and needs to be inspected and secured, the Carrier's driver must have additional seals with him and must reseal the door(s) after the inspection is completed and record the new seal numbers on the transport documents. Such procedures should be avoided, except in circumstances where that safe transport of the cargo is at issue. In such instances, Carrier must call ROAR Logistics in advance of removing the seal (if possible, without compromising safety) so that potential removal of the seal can be coordinated with the shipper or other party in interest. After affixing the seal, the driver must also record the date, time and circumstances surrounding the in-transit regulatory inspection on the transport documents.

When arriving at the receivers (consignee) facility, a receiving location employee must verify seal integrity and ensure the seal numbers match those on the driver's transport documents. Only the receiving location's designated individual may remove the seals once verified to match the driver's transport documents, and neither Carrier, nor its driver or others, shall remove a seal, except for in the immediate presence of and at the instruction of a receiver.
